### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: the prior art, either singly or in combination, fails to anticipate or render obvious, forming titanium nitride being at least a portion of a first capacitor electrode, densifying the titanium nitride by exposure of the titanium nitride to one or both of an oxidizing atmosphere and a nitridizing atmosphere, forming a layer comprising aluminum oxide over and physically against the densified titanium nitride, forming a high-k dielectric material over the layer comprising aluminum oxide in combination with the other limitations of independent claim 37.

The examiner notes that while Brown teaches the use of utilizing a titanium nitride layer as a portion of the bottom electrode and Haukka et al. teach the method of utilizing a combination of aluminum oxide and a high-k dielectric, the references do not teach the combination of densifying the titanium nitride layer by exposure of the titanium nitride to one or both of an oxidizing atmosphere and a nitridizing atmosphere, and forming a layer comprising aluminum oxide over and physically against the densified titanium nitride.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
